

LightBound Business Continuity

LightBound provides a comprehensive range of solutions for today’s eBusinesses.

LightBound’s voice and data solutions help businesses increase their productivity and profitability.

Expect the Unexpected

Many companies have a plan in place to recover critical business information. However, many fail to realize the importance of their employee’s ability to access this information as soon as possible.

If a disaster strikes and your key employees cannot access your mission-critical systems, your business will come to a grinding halt.

Recovering your core data is only a minor part of the Business Continuity plan; the information is of no use unless your employees have access to your data and are able to use it.

Weighing Cost vs. Risks

Although the chances of losing your total operation may be slim, days, hours, or even minutes of inoperability can cause a tremendous blow to your organization. Every company is at risk for potential disruptions which can cause a loss of data, connectivity or facilities.

- Flooding
- Power Outages
- Chemical Spill or Biohazard
- Roof Leaks or Pipe Burst
- HVAC Failures or Maintenance

The more employees you can immediately put to work after an interruption, the more quickly you are back in business.

Why LightBound?

LightBound provides proven answers for IT managers who must safeguard their company’s business.

Experience

We have the most experienced and seasoned IT professionals. We are available to help our customers understand their needs, develop a working recovery architecture, and provide consultation to aide in the implementation process.
