

Backup as a Service and Data Protection

LightBound Backup data management software ensures reliable backup and rapid recovery of information assets. LightBound Backup Solution enables users to:

1. Easily protect data residing in complex, diverse environments with a truly unified platform.
2. Securely manage data across many locations and tiers of storage including primary, nearline, archive, tape, and cloud.
3. Rapidly recover applications and data from environments as diverse as Virtual Machines, messaging, database, and file.
4. Seamlessly report on your complete data protection environment with automated alerts, standard read-outs, or highly customized search capabilities.
5. Cost effectively support your solution with enterprise class monitoring, training, and professional services.

Backup and Recovery Services

Capabilities	Benefits
Common Technology Platform	Ensure that important features like deduplication and encryption work seamlessly across both disk and tape to reduce cost, improve reliability, and increase operational efficiency.
Virtual Server Protection	Protect hundreds of VMs in minutes and readily scale to thousands of VMs with easy to use, policy based discovery, installation, backup, and reporting tools.
Cloud Storage Connectors	Begin realizing the benefits of the cloud with confidence. LightBound Backup Solution software can incorporate additional cloud storage providers, knowing that data can be moved seamlessly to other data centers and clouds as business requirements dictate.
Archive and Search	Reduce the cost to store, manage and maintain your data. Automatically deduplicate, encrypt, compress, and move data to storage tiers that match its business value. An intuitive user interface and search tools ensure that data can be quickly converted into usable information.
Gen 3 Deduplication	Improve your RPO and RTO with a better approach to deduplication. Users of source side deduplication can reduce backup times by more than 50 percent and achieve significant storage cost savings.

LightBound Backup Solution is allocated in affordable 100 Gigabyte increments which can scale easily with increasing data requirements. We will need to know the total number of machines and the amount of data you would like to backup to determine the level of effort. If you currently have a circuit and internet with LightBound the connectivity with this backup solution is even easier.
