Internet, and Cloud Com-
puting solutions help
businesses increase their
productivity and profitability.*

Dedicated Internet Access

LightBound provides your organization dedicated point-to-point circuits to connect directly to the Internet with low-latency high performance. LightBound Internet provides high performance through fully redundant networks, two 2.5 GB connection to Chicago, IL and Ashburn, VA, coupled with BGP routing, instantly reroutes traffic to the best possible path providing always on and shortest path connectivity. In addition performance is further enhanced through private peering relationships which provide multiple routing paths for continuous, uninterrupted transport of your data with fewer hops and low latency, which means fewer delays.

Server Colocation

LightBound enables customers to save money and resources by housing their business equipment in LightBound's secure, environmentally controlled, SAS 70 Type II Certified Data Center with direct network connectivity to its diverse Internet backbone. Quite simply, businesses can outsource the responsibility for all of their facilities to LightBound, while retaining control over the administration of their equipment, content and applications.

E-mail Virus and Spam Control

Systems can be reliably protected with LightBound's Email virus and Spam control utilizing the industry leading Barracuda Spam Firewall®. Whether individuals or businesses have their own Email server or utilize ours, LightBound can provide the protection users need.

Hosted and On-Premise VoIP Phone Systems and Voice Services

Whether your need is traditional TDM PRIs, POTs, or simply want to take advantage of new technologies such as SIP, LightBound has a solution to meet your needs.

Fonality trixbox IP (PBX) can provide enterprise class functionality at a small/medium business price. We offer robust feature rich systems at a price that fits your budget. Introductory. Hosted service available for businesses with 5 or more seats with introductory pricing at \$34.95 per seat per month and as low as \$18.95 per seat per month for 50 or more seats.

WAN Consolidation, Managed Fiber & Leased Lines

LightBound has access to 19 telecommunication carriers in our data center and can provide a direct connection between businesses' corporate and remote office data networks and the Internet. Circuits offerings include FT1/T1, Ethernet, DS3, OC-3 to a Gigabit service and also managed dark fiber. Customers can move their WAN to the LightBound data center and take advantage of cost savings by choosing the best carrier costs and reducing last mile connect charges. Contracting service with LightBound also provides your company with a high level WAN engineer through our NOC service that monitors & manages circuits 24 hours per day 7 days a week for the highest uptime availability of your corporate network. This relieves your staff of having operational support of complicated WAN networks and frees them to work on activities more applicable to business productivity.
